SKILLS

CORE

TypeScript · React · LLM Integration · RAG · WebSocket · SSE · Three.js / WebGL · Redux Toolkit · D3.js · AG Grid · Canvas 2D · CSS / LESS / SASS · Tailwind · Vite · Accessibility · Playwright · Jest

ALSO WORKED WITH

Python · FastAPI · PID Control · Physics Simulation · Java · Spring Boot · SQL · Snowflake · Oracle · Splunk · Tableau · AWS · Docker · Kubernetes · Redis

EDUCATION

M.S. Computer Science, 2015

M.S. Software Engineering

B.Tech, Electronics & Communications Engineering

Sasideep Kakumani

Frontend Engineer · AI & Real-Time Systems

SUMMARY

Frontend engineer with **10+ years** building high-scale enterprise UIs at Apple, now focused on AI product interfaces and hardware-adjacent UI — real-time LLM streaming, RAG retrieval, and control-loop visualization (PID, sensor telemetry), backed by a decade of dashboard work for **60,000+ daily users**.

EXPERIENCE

Frontend Engineer · Apple Inc. *(via VMC Soft Tech)* Apr 2017 – Present

- Led a conversational AI assistant pilot for a targeted **5,000-user** internal rollout — built the streaming chat UI with real-time LLM token rendering over SSE, end to end.
- Shipped **10+ web apps** for Apple's internal analytics platform, used daily by **60,000+ users** across operations — replacing manual reporting workflows and shortening the path from data to decision, while owning the full arc from requirements gathering through production.
- Delivered Report Studio, a drag-and-resize dashboard builder now embedded across multiple internal teams, plus custom D3.js and AG Grid visualizations for complex data drill-downs.
- Architected the Admin Health Module, a real-time dashboard tracking **20+ KPIs**, and served as primary liaison across Support, DevOps, and Database teams on infrastructure and data integrity.

React · TypeScript · LLM / SSE · D3.js · AG Grid · Redux Toolkit · Playwright

UI Developer · Apple Inc. *(via Galaxy i Tech)* Jul 2015 – Mar 2017

- Delivered enterprise UI components for internal Apple tools with a focus on UX quality and performance.
- Migrated the CSAT platform from a legacy Flash-based app to React, validated with multiple rounds of user interviews.
- Integrated automated test suites (Cypress/Playwright) to protect critical user journeys and reduce regressions.

React · Redux · TypeScript · CSS / LESS · Cypress · Playwright

Software Engineer · Tata Consultancy Services Jun 2012 – Jun 2014

- Built frontend POCs for enterprise insurance, geospatial risk mapping, and actuarial loss analysis.
- Co-designed an early telematics driving-risk concept, later revisited independently as a full driving-risk simulator (WebSocket + physics engine).

HTML · CSS · jQuery · Bootstrap · Geospatial APIs

INDEPENDENT PROJECTS

Docs RAG Assistant — hybrid vector + keyword retrieval with cross-encoder reranking and confidence-gated LLM generation, with a live pipeline trace.

Drone PID Controller — full proportional-integral-derivative control loop with real-time physics simulation, the class of algorithm used in flight controllers.

Speech Visualizer — real-time pitch detection and Whisper transcription over the Web Audio API, rendered live to canvas.

Recommendation Engine — K-nearest-neighbor collaborative filtering computed client-side, with explainable "why this was recommended" reasoning.

FictaNode — interactive fiction platform built and shipped solo — Google OAuth, puzzle-gated chapter progression with persistent reading progress, and a FastAPI backend, live at fictanode.com.
